Put Gearflow on your home screen

Gearflow runs in your phone's browser. Add its icon to your home screen once, and it opens full screen with no browser bar and stays signed in.

BEFORE · PARTS HUB

Before, you opened the **Parts Hub** app from the app store, and it started on **Order**. *Redrawn from the old screen.*

NOW · GEARFLOW

1 ▼ **On a phone?** Add Gearflow to your Home Screen first, then sign in from the icon.

1. Tap **Share** (on iOS 26, tap ••• first).
2. Tap **Add to Home Screen**, then **Add**.
3. Open Gearflow from the new icon and sign in there.

Gearflow app

iPhone and iPad have no install button, so it takes three taps in Safari:

2 Tap **Share**. On iOS 26, tap ••• first.

3 Scroll down and tap **Add to Home Screen**.

3 Tap **Add**, then open Gearflow from the new icon.

If the icon asks you to sign in, enter the code once. It then stays signed in for about two months.

1. On your iPhone, open **Safari** and go to **app.gearflow.com**. Under **On a phone?** the sign-in page shows these steps.
2. Tap **Share**. On iOS 26, tap ••• first.
3. Scroll down and tap **Add to Home Screen**, then tap **Add**.
4. Open Gearflow from the new icon. If it asks you to sign in, enter the code once. It stays signed in for about two months.
5. On Android: open the browser menu ⋮, then tap **Add to Home screen** or **Install app**.

Tip: Already signed in? The same steps are on your **Profile**, under **Gearflow app**.

What changed: There is no app store download. The old Parts Hub app is gone: Gearflow opens from its home screen icon.
